BRAHMAIAH CHEERLA

Junior DevOps Engineer

brahmaiahcheerla@gmail.com | +91 8885386180 | https://www.linkedin.com/in/brahmaiah-cheerla

SUMMARY

AWS DevOps Engineer with 1.6 years of experience managing cloud infrastructure using AWS services like EC2, S3, VPC, and RDS. Skilled in CI/CD automation with Jenkins, Git, Docker, and Kubernetes, along with Terraform for infrastructure as code. Experienced in monitoring, security, and high availability using CloudWatch, ELB, and IAM..

EXPERIENCE

Atlast Infosoft Solutions, Bangalore **08-2024 to present**

Junior DevOps Engineer

- Collaborated closely with development teams to define Git branching strategies, improve code integration, and streamline pull requests and reviews.
- Containerized applications using Docker and deployed them on Kubernetes, ensuring high availability, fault tolerance, and efficient scaling through replicas, autoscaling, and load balancing.
- Designed and automated end-to-end CI/CD pipelines using Jenkins, Git, and Maven for continuous build, test, and deployment, reducing release cycles by 30%.
- Implemented blue-green and canary deployment strategies on Kubernetes to achieve zero-downtime application releases.
- Integrated security and vulnerability scanning into CI/CD pipelines using Jenkins plugins and container image scanning tools.
- Monitored system and application performance using Prometheus and Grafana, creating custom dashboards and alerts that reduced incident response time by 40%.
- Optimized Kubernetes cluster resource utilization through monitoring and tuning, improving performance while reducing infrastructure costs.
- Provisioned and managed scalable, production-ready AWS infrastructure using Terraform, enabling consistent and automated resource deployment across environments

Project

Blood Bank Management System

CI/CD | Docker | Kubernetes | AWS | Security

- Built an end-to-end CI/CD pipeline using Jenkins to automate build, code quality checks, security scanning, and deployment.
- Integrated SonarQube for static code analysis and Trivy for container vulnerability scanning, following DevSecOps practices.
- Containerized the application and MySQL using Docker, ensuring consistent and portable deployments across environments.
- Deployed and managed the application on Kubernetes (AWS) using Deployments, StatefulSets, PVCs, ConfigMaps, and Secrets.
- Implemented HPA and Ingress for auto-scaling and external access, ensuring high availability and reliable application performance.

SKILLS

- **Methodologies:** SDLC, Agile (Scrum)
- **Operating System:** Linux
- **Cloud Platform:** AWS
- **Source Code Management (SCM):** Git, GitHub, Bitbucket
- **Build Tool:** Maven
- **CI/CD:** Jenkins, AWS CodePipeline
- **Containerization:** Docker
- **Container Orchestration:** Kubernetes, Docker Swarm
- **Infrastructure as Code (IaC):** Terraform
- **Configuration Management:** Ansible
- **Monitoring & Logging:** Prometheus, Grafana
- **Database:** AWS RDS (MySQL)
- **Scripting:** Bash
- **Security & Code Quality:** SonarQube, Trivy

Education

B.Sc. (MECS – Mathematics, Electronics, Computer Science) – Sree Chaitanya Degree College, Kavali (2019)
