SUMMARY

AWS DevOps Engineer with 1.6 years of experience managing cloud infrastructure using AWS services like EC2, S3, VPC, and RDS. Skilled in CI/CD automation with Jenkins, Git, Docker, and Kubernetes, along with Terraform for infrastructure as code. Experienced in monitoring, security, and high availability using CloudWatch, ELB, and IAM..

EXPERIENCE

TDCX, Hyderabad **08-2024 to present**

DevOps Engineer

- Collaborated closely with development teams to define Git branching strategies, improve code integration, and streamline pull requests and reviews.
- Containerized applications using Docker and deployed them on Kubernetes, ensuring high availability, fault tolerance, and efficient scaling through replicas, autoscaling, and load balancing.
- Designed and automated end-to-end CI/CD pipelines using Jenkins, Git, and Maven for continuous build, test, and deployment, reducing release cycles by 30%.
- Implemented blue-green and canary deployment strategies on Kubernetes to achieve zero-downtime application releases.
- Integrated security and vulnerability scanning into CI/CD pipelines using Jenkins plugins and container image scanning tools.
- Monitored system and application performance using Prometheus and Grafana, creating custom dashboards and alerts that reduced incident response time by 40%.
- Optimized Kubernetes cluster resource utilization through monitoring and tuning, improving performance while reducing infrastructure costs.
- Provisioned and managed scalable, production-ready AWS infrastructure using Terraform, enabling consistent and automated resource deployment across environments

Project

Blood Bank Management System

CI/CD | Docker | Kubernetes | AWS | Security

- Built an end-to-end CI/CD pipeline using Jenkins to automate build, code quality checks, security scanning, and deployment.
- Integrated SonarQube for static code analysis and Trivy for container vulnerability scanning, following DevSecOps practices.
- Containerized the application and MySQL using Docker, ensuring consistent and portable deployments across environments.
- Deployed and managed the application on Kubernetes (AWS) using Deployments, StatefulSets, PVCs, ConfigMaps, and Secrets.
- Implemented HPA and Ingress for auto-scaling and external access, ensuring high availability and reliable application performance.

SKILLS

- **Methodologies:** SDLC, Agile (Scrum)
- **Operating System:** Linux
- **Cloud Platform:** AWS
- **Source Code Management (SCM):** Git, GitHub, Bitbucket
- **Build Tool:** Maven
- **CI/CD:** Jenkins, AWS CodePipeline
- **Containerization:** Docker
- **Container Orchestration:** Kubernetes, Docker Swarm
- **Infrastructure as Code (IaC):** Terraform
- **Configuration Management:** Ansible
- **Monitoring & Logging:** Prometheus, Grafana
- **Database:** AWS RDS (MySQL)
- **Scripting:** Bash
- **Security & Code Quality:** SonarQube, Trivy

Education

B.Sc. (MECS – Mathematics, Electronics, Computer Science) – Sree Chaitanya Degree College, Kavali (2019)
